A Color Atlas of Comparative Pathology of Pulmonary Tuberculosis-Franz Joel Leong 2016-04-19 An annual death toll of 2 million, coupled with rising drug resistance, highlights the need for the development of new drugs, better diagnostics, and a tuberculosis (TB) vaccine. Addressing these key issues, A Color Atlas of Comparative Pathology of Pulmonary Tuberculosis introduces TB histopathology to the non-histopathologists, students, scientists, and doctors working, learning, and teaching in the field of TB. It contains 100 color photographs and illustrations that bring clarity to the information presented. The atlas takes the unusual approach of covering multiple species histopathology, arguably the first and quite possibly the only resource to do so. It provides a simple, annotated, and visual presentation of the comparative histopathology of TB in human and animal models. The editors have compiled information that helps TB scientists to distinguish between the features of all major animal models available and to use them with their strengths and limitations in mind. The book provides guidance for selecting the best animal model(s) to answer specific questions and to test the efficacy of drug candidates.

Gross Pathology of Avian Diseases-Tahseen Abdul-Aziz 2018 "The sections in the book are organized by diseases, which are grouped by etiology. Each section consists of text and pictures of gross lesions. The majority of pictures were taken in situ to show how the lesions appear at necropsy. Although gross lesions are emphasized, etiology, clinical signs and, if applicable, pathogenesis of the disease process and transmission of infectious agents are included. More than 1,200 high-quality figures show the gross pathology of over 120 avian diseases. The overwhelming majority of pictures come from diagnostic cases that the authors have seen during their careers as avian pathologists. Several figures are included for some diseases to show gross lesions in organs and tissues that vary in distribution, extent and severity"--Publisher's description.

Atlas of Gross Neurosurgical Pathology-K-J. Zülch 2014-04-13 This Atlas is one of a series devoted to neurosurgical and neuro logical conditions and is complementary to Atlas of the Histology of Brain Tumors (Springer-Verlag, Berlin-Heidelberg-New York 1971), which was the first in the atlas series. The Atlas is based on the Handbuch der Neurochirurgie, Vols. I and III (Springer 1956, 1959) but, whereas this is a comprehensive reference work, the present book is intended to give the practicing neurosurgeon, neuroradiologist, neurointensivist, and neurologist the concise information they need for diagnostic purposes concerning the aspect, site, and ma lignancy of tumors and other space-occupying lesions in the brain. The schematic diagrams showing the sites of predilection of these tumors, as well as a pOGnosis based on the degree of malignancy, will be most useful here. The early chapters discuss the general rules governing displ ace ments due to space-occupying lesions and the manifestations of brain herniations. Other neurosurgical conditions, such as localized inflammatory processes, edema and obstructive hydrocephalus, are dealt with in brief chapters; in this case I have chosen to restrict these rather than go into a discussion of changes in terminology and classification, we have retained the classification used in the Atlas of Histology of Brain Tumors.
