Aimed at professionals in the textile industry, this text is a perfect resource for textile engineers/technologists/manufacturers, spin quality control engineers, spin quality assurance personnel, and other industry professionals.

Advances in Yarn Spinning Technology - C A Lawrence 2010-09-27
This book provides an invaluable single source of information on the advances in yarn spinning technologies. Advanced spinning systems are described and comparisons are made of the properties of the yarns produced, and resultant finished products, with those from conventional systems. Part one provides an introduction to yarn fibre spinning and structure. Chapters discuss the principles of ring spinning and open-end spinning of yarns. Yarn structure and properties from different spinning techniques and yarn structural requirements for knitted and woven fabrics are also examined. Part two covers advances in particular yarn spinning technologies. Topics range from siro spinning to compact spinning technology and air-jet spinning. Final chapters explore how to minimise fibre damage which occur during spinning and the use of spin finishes for textiles. With its distinguished editor and array of international contributors, Advances in yarn spinning technology is an important text for spinners, yarn manufacturers and fabric producers, as well as researchers, technicans, engineers and technologists in this sector of the textile industry. Documents advances in spinning technologies and presents comparisons between systems Assesses particular textile spinning technologies with specific chapters focusing on, compact, rotor, friction and air-jet spinning. Reviews measures to minimise fibre damage caused by spinning are investigated with specific relevance to rotor and friction spinning

Process Control in Speed Frame - R. Senthilkumar 2016-05-19
Speed frame is also called as simplex or roving frame. The speed frame process minimizes the silver weight to a suitable size for spinning into yarn and inserting twist, which maintains the integrity of the draft strands. It is impossible to feed the silver to ring frame for yarn production due to limitation in draft in ring frame.

Process Control in Winding - R. Senthilkumar 2016-05-20
Yarn winding is the final stage of the yarn forming process and the starting point for various subsequent processes, from weaving or knitting to textile finishing. Yarns manufactured and packaged from ring spinning are not in the optimum condition to be used to form fabrics. Package size, build and other factors make it necessary for the yarn to be further processed to prepare it to be handled efficiently during fabric formation. Yarn winding can be viewed as a packaging process, forming a link between the last few elements of yarn manufacturing and the first element of fabric manufacturing process. This interface function of winding is what makes the winding process so important.

Process Control in Rotor Spinning - R. Senthilkumar 2016-05-20
Open-end spinning is a process in which fibrous material is highly drafted, ideally to the individual fiber state, creating a break in the continuum of the fiber mass. The individual fibers are subsequently collected onto the open end of a yarn that is rotated to twist the fibers into the yarn structure to form a continuous yarn length. Rotor spinning, usually referred to as open-end spinning, was commercially introduced during the late 1960s and is second only to ring spinning in terms of short staple yarn production. The rotor spinning machine is fed with draw frame sliver which transform the yarn directly into packages, eliminating the roving process. With this spinning method, twisting and package building are separated by employing the false-twist principle. The first rotor spinning machine suitable for industrial use was presented in 1967 with the name BD200 in ITMA exhibition. The current share of rotor-spin yarn is around 20% of total staple-fiber yarn production and it is increasing steadily.

Process Control in Carding - R. Senthilkumar 2016-05-19
“Well carded is half spun” is a famous adage widely used among the spinning technologists around the world. Carding is considered as the heart of the spinning process. Carding is a mechanical action of reducing tufts of entangled fibers into a continuous web of individual fibers suitable for subsequent processing. The disentangling of fiber tufts facilitates effective trash removal. This is achieved by passing the fibers between closely spaced surfaces clothed with opposing sharp points. Carding process is considered the most important operation in the whole cotton spinning process.

Cotton - S. Gordon 2006-12-22
Despite the increased variety of manufactured fibres available to the textile industry, demand for cotton remains high because of its suitability on the basis of price, quality and comfort across a wide range of textile products. Cotton producing nations are also embracing sustainable production practices to meet growing consumer demand for sustainable resource production. This important book provides a comprehensive analysis of the key scientific and technological advances that ensure the quality of cotton is maintained from the field to the consumer's hand.

Scenes of Nature, Signs of Men-Tony Tanner 1989-08-25 This book is about the relationship of the American writer to his land and language - to the 'scene' and the 'sign', to the natural landscape and the inscriptions imposed upon it by men. Among the questions considered in the first section of the book are how does American Romantic writing differ from European; what are the peculiar problems faced by the American artist, and what roles does he adopt to tackle them; what kind of writing results when authors as different as Henry Adams and Mark Twain lament the vanishing of an earlier America, or when Adams and Henry James review their complex relationship to their homeland, or when W. D. Howells and Stephen Crane seek to define their themes in a specifically American setting. The second section of the book examines similar concerns in a number of contemporary writers, notably Thomas Pynchon, John Barth, Donald Barthelme, John DeLillo, and William Gass.

Schlepping Through the Alps: Sam Apple 2009-01-16 Hans Breuer, Austria's only wandering shepherd, is also a Yiddish folksinger. He walks the Alps, shepherd's stick in hand, singing lullabies to his 625 sheep. Sometimes he even gives concerts in historically anti-Semitic towns, showing slides of the flock as he belts out Yiddish ditties. When New York-based writer Sam Apple hears about this one-of-a-kind ecclesiast, he flies overseas and signs on as a shepherd's apprentice. For thoroughly urban, slightly neurotic Sam, stumbling along in borrowed boots and burdened with a lot more baggage than his backpack, the task is far from a walk in Central Park. Demonstrating no immediate natural talent for shepherding, he tries to earn the respect of Breuer's sheep, while keeping a safe distance from the shepherd's harem. The wild adventure unfolds, the unlikely duo of Sam and Hans meander through a paradise of woods and high meadows toward awkward encounters with Austrians of many stripes. Apple is determined to find out if there are really as many anti-Semites in Austria as he fears and to understand how Hans, who grew up fighting the lingering Nazism in Vienna, became a wandering shepherd. What Apple discovers turns out to be far more fascinating than he had imagined. With this odd and wonderful book, Sam Apple joins the august tradition of Tony Horwitz and Bill Bryson. Schlepping Through the Alps is as funny as it is moving.
