many of the problems often found in modern medicine -- dehumanized treatment, overspecialization, neglect of the mind's healing resources -- are directly traceable to medicine's outmoded concepts of the body. New and exciting alternatives are proposed by some of the foremost physicians and philosophers working in the medical humanities today.

Atlas of Human Anatomy: Latin Terminology E-Book Frank H. Netter 2018-08-24 The only anatomy atlas illustrated by physicians, Atlas of Human Anatomy, 7th edition, brings you world-renowned, exquisitely clear views of the human body with a clinical perspective. In addition to the famous work of Dr. Frank Netter, you'll also find nearly 100 paintings by Dr. Carlos A. G. Marhams, one of today's foremost medical illustrators. Together, these two uniquely talented physician-artists highlight the most clinically relevant views of the human body. In addition, more than 50 carefully selected radiologic images help bridge illustrated anatomy to living anatomy as seen in everyday practice. Anatomical labels follow the international standard in Latin. Seeley's Essentials of Anatomy and Physiology Cinnamon Vanputte 2009-02 Designed for the one-semester course, Seeley's Essentials of Anatomy and Physiology is written to allow instructors the ability to accomplish one overall goal: to teach the basics of AAndP while fostering the skill of problem solving. Through learning how to solve problems and think critically, students learn AAndP based on two themes: the relationship between structure and function, and homeostasis.

Sensory Processing in Aquatic Environments Shaun P. Collin 2008-04-08 Research on sensory processing or the way animals see, hear, smell, taste, feel and electrically and magnetically sense their environment has advanced a great deal over the last fifteen years. This book discusses the most important themes that have emerged from recent research and provides a summary of likely future directions. The book starts with two sections on the detection of sensory signals over long and short ranges by aquatic animals, covering the topics of navigation, communication, and finding food and other localized sources. The next section, the co-evolution of signal and sense, deals with how animals decide whether the source is prey, predator or mate by utilizing receptors that have evolved to take full advantage of the acoustical properties of the signal. Organisms living in the deep-sea environment have also received a lot of recent attention, so the next section deals with visual adaptations to limited light environments where sunlight is replaced by bioluminescence and the visual system has undergone changes to optimize light capture and sensitivity. The last section on central co-ordination of sensory systems covers how signals are processed and filtered for use by the animal. This book will be essential reading for all researchers and graduate students interested in sensory systems.

Atlas of Immunology Julius M. Cruse 2013-03-14 The Atlas of Immunology is a unique pictorial reference, containing more than 1000 illustrations depicting essentially every important concept in understanding immunology. Diagrams are included for all levels of understanding; some show basic ideas, while others provide a more detailed treatment for specialists.

Norsk bokfortegnelse 1998

Studieopgaver til menneskets anatomi og fysiologi Karl C. Torverud 2015

Physics, Pharmacology and Physiology for Anaesthetists Matthew E. Cross 2014-03-06 A quick reference to basic science for anaesthetists, containing all the key information needed for FRCA exams. Sport & Remedial Massage Therapy Mel Cash 1996 The definitive reference book on massage as a remedial therapy for sports training and injuries.

The Philosophy of Art History (Routledge Revivals) Arnold Hauser 2018-12-07 First published in 1959, this book is concerned with the methodology of art history, and so with questions about historical thinking; it enquires what scientific history of art can accomplish, what are its mean and limitations? It contains philosophical reflections on history and begins with chapters on the scope and limitations of a sociology of art, and the concept of ideology in the history of art. The chapter on the concept of "art history without names" occupies the central position in the book — thoroughly discussing the basic philosophical outlook for the whole work. There are also further chapters on psychoanalysis, folk art and popular art. The chapter on the role of convention in the history of art points the way for further study.
