Automated and Digitization Of University Libraries: Status, Prospects and Problems 1st Edition

Hanrong Wang 2013-06-30

Academic libraries have a long history both in the USA and China, with institutions developing along parallel lines. This book is unique in that it spans the development of both academic library systems. Based on first-hand knowledge and research, the book offers a wealth of information and ideas that will be of interest to students and professionals alike.

The book is organized into five parts: The origins and development of academic libraries in the USA and China, the current state of academic libraries in the USA and China, the future of academic libraries in the USA and China, and the challenges and opportunities for academic libraries in the USA and China.

The book is written in English and is divided into 12 chapters, each of which is dedicated to a specific topic. Each chapter includes an introduction, a literature review, a discussion of the topic, and a conclusion. The book also includes a glossary of key terms and a list of references.

The book is an essential resource for students, professionals, and researchers who are interested in the history, development, and future of academic libraries in the USA and China. It provides a comprehensive overview of the field and offers valuable insights into the challenges and opportunities that face academic libraries today.

In addition to the main text, the book also includes a number of appendices that provide additional information and context. These include a list of important dates and events, a list of key figures in the history of academic libraries, and a list of important academic libraries in the USA and China.

Overall, the book provides a comprehensive and up-to-date overview of the field of academic libraries in the USA and China. It is an essential resource for anyone interested in the history, development, and future of academic libraries in these countries.
communities planning to implement modern tools and technology in their libraries. This book also provides a practical approach to various new technologies implemented in various libraries. In this direction, this book provides ideas to its readers about the approaches pertaining to practical implementations of modern tools and technology, software platforms to automate their libraries, and other related technical aspects required for libraries. The target audience of this book will be students doing library science courses, researchers working in the field of library and information science and library professionals. It will also guide professionals working that includes librarians, officers in libraries, information scientists, consultants, trainers, students, researchers, and other library communities who are planning to adapt and implement modern tools and technologies in their libraries.

National Central Library Newsletter 2008
Global Library and Information Science Ismail Abdullahi 2009-05-05 This book presents international librarianship and library science through insightful and well-written chapters contributed by experts and scholars from six regions of the world. The role of public, academic, special, school libraries, as well as library and information science education are presented from the early development to the present time. An engaging, readable approach will help the reader to understand librarianship in Africa, Asia, Australia and New Zealand, Europe, Latin America, and the Caribbean, the Middle East, and North America. Edited by Ismail Abdullahi, Professor of Global Library and Information Science, this book is a must-read for library science students and teachers, librarians, and anyone interested in Global librarianship.
