It strives to apply both economic and asset management principles and practices to the valuation, handling, and deployment of information assets. This book specifically shows: CEOs and business leaders how to more fully wield information as a corporate asset CIOs how to improve the flow and accessibility of information CFOs how to help their organizations measure the actual and latent value in their information assets. More directly, this book is for the burgeoning force of chief data officers (CDOs) and other information and analytics leaders in their valiant struggle to help their organizations become more infosavvy. Author Douglas Laney has spent years researching and developing Infonomics and advising organizations on the infinite opportunities to monetize, manage, and measure information. **Bottom-Up Default Analysis of Corporate Solvency Risk**
Mr. Jorge A. Chan-Lau 2017-06-08 This paper suggests a novel approach to assess corporate sector solvency risk. The approach uses a Bottom-Up Default Analysis that projects probabilities of default of individual firms conditional on macroeconomic conditions and financial risk factors. This allows a direct macro-financial link to assessing corporate performance and facilitates what-if scenarios. When extended with credit portfolio techniques, the approach can also assess the aggregate impact of changes in firm solvency risk on creditor banks’ capital buffers under different macroeconomic scenarios. As an illustration, we apply this approach to the corporate sector of the five largest economies in Latin America.

**Thailand** - International Monetary Fund. Asia and Pacific Dept 2019-10-07

This 2019 Article IV Consultation discusses Thailand’s robust policy framework and ample buffers continue to underpin its resilience to external headwinds. The authorities have taken measures to strengthen medium-term fiscal management and financial stability. With respect to the outlook, growth is projected to slow down to about 3 percent in 2019–20 reflecting external and domestic headwinds. On the external side, the projected slowdown in global demand and uncertainty about trade tensions are expected to weigh on exports throughout 2019. Policies should aim at boosting growth, while promoting domestic and external rebalancing and making growth more inclusive. The IMF staff recommends a front-loaded fiscal impulse in FY 2020. Thailand should use available fiscal space judiciously to spur domestic demand and support potential output. Implementation of macro-critical public infrastructure projects would also crowd in private investment. The report also highlights that structural reforms aimed at improving the implementation of public investment, strengthen social safety nets, and raise productivity in an increasingly digital economy, would boost growth and enhance its inclusiveness.

Unlocking Financial Data-Justin Pauley 2017-10-06 Investors recognize that technology is a powerful tool for obtaining and interpreting financial data that could give them the one thing everyone on Wall Street wants: an edge. Yet, many don’t realize that you don’t need to be a programmer to access behind-the-scenes financial information from Bloomberg, IHS Markit, or other systems found at most banks and investment firms. This practical guide teaches analysts a useful subset of Excel skills that will enable them to access and interpret financial information—without any prior programming experience. This book will show analysts, step-by-step, how to quickly produce professional reports that combine their views with Bloomberg or Markit data including historical financials, comparative analysis, and relative value. For portfolio managers, this book demonstrates how to create professional summary reports that contain a high-level view of a portfolio’s performance, growth, risk-adjusted return, and composition. If you are a programmer, this book also contains a parallel path that covers the same topics using C#. Topics include: Access additional data that isn’t visible on Bloomberg screens Create tables containing corporate data that makes it possible to compare multiple companies, bonds, or loans side-by-side Build one-page analytic (“Tear Sheet”) reports for individual companies that incorporates important financials, custom notes, relative value comparison of the company to its peers, and price trends with research analyst targets Build two-page portfolio summary report that contains a high-level view of the portfolio’s performance, growth, risk-adjusted return, and composition Explore daily prices and facility information for most of the tradable corporate bond and loan market Determine the relationship between two securities (or index) using correlation and regression Compare each security’s performance to a cohort made of up of securities with similar risk and return characteristics Measure portfolio risk-adjusted return by calculating variance, standard deviation, and Sharpe ratio Use Markit data to identify meaningful trends in prices, new issue spreads, and refinancings.

Structural reforms are needed if Asia is to maintain its position in the global economy, including reforms aimed at enhancing productive capacity. Needed reforms range from state-owned enterprise and financial sector reform in China to labor and product market reforms in Japan and reforms to remove supply bottlenecks in India, ASEAN, frontier economies, and small states.
